WordPress designer with 6+ years of experience in website creation, customization, and maintenance. Building fast, functional, and user-focused responsive websites with WordPress.

PROFESSIONAL EXPERIENCE

Sunny Society

August, 2026

[Sunny Society](#) is a voluntary organization focused on positive change and constructive development of the society. Although the site is still under construction, it demonstrates the scope of my work. The landing pages were designed using Elementor (free version) and a Themeforest theme (that comes with a lot of modern reusable widgets). Implemented WooCommerce for shop management and custom form for career applications & leads.

- Designed all pages using a modern multi-grid layout, custom fonts, and a vibrant, brand-aligned color palette.
- Structured an effective job board/career management system using forms, including resume-upload functionality. Administrators can view submissions through dashboards.
- Implemented WooCommerce with an AJAX-based checkout system, on-page cart functionality, quick-view features, modern product pages, and product inquiry forms.
- Designed clean menubars with custom donate page redirection button and on-page cart basket view. also added sticky menu on scroll-up and tap to top scroll.
- Yet to be implemented: On-page SEO, Google Console (including sitemap) & Analytics submission, Google Site Kit, Meta Pixel to track ads and authority, Google AdSense submission and Advanced Ads manager for responsive implementation, cross-device responsiveness, speed optimization and caching, security enhancement.

Dhaka University Model United Nations Association (DUMUNA)

2019 - 2025

[DUMUNA](#) is the first ever model UN organization of Bangladesh and has been in operation since 2011. I developed the website in 2019 and provided ongoing maintenance until 2025. The client wanted a parallax-based design throughout the landing pages, along with forms for smooth communication.

- Client wanted something like this [site](#). Parallax layout all across the site. Single page "Announcement", "Blogs" with no sidebar & forms. On-page SEO
- The pages were pretty easy to structure from the given site, which was built with Wix. Maintaining the speed all across was a test of ability. Used "LiteSpeed" for caching and compressing. Though the images were perfectly compressed, still they were 600KB per image and I had to use at least 10 a page. I've used the "Smush" plugin to further compress all the images maintaining the quality and converted into (.webp) format to save some kilobytes per image. Used "Instant Click" from LiteSpeed to start preloading the page based on visitors' mouse movements. Then increased the browser cache limit to store the cache on visitors' end.
- All of the pages are designed with two plugin Elementor and [Template Kit Import](#). Imported some free Elementor kit page layout from Envato Elements. Designed a simple parallax structured page and then built the whole site on the basis of that structure to maintain the parallax and preloading performance.
- Implemented organizational style sticky manubar with announcement button. Just created a category in the blog called "Announcements", published some content and defined the category on elementor post widget.
- Implemented all the possibilities of on-page SEO to rightfully rank the site on a keyword "dumuna". Finally submitted the sitemaps and installed Google Site Kit to observe the traffic. Here is the [result](#). ([ai-overview](#))

Institute of Water and Flood Management (IWFM), BUET

August, 2024

[IWFM](#) pursues research and capacity development in the field of water and flood management that is vital for economic development and social prosperity of the country. The site was broken (pages, blogs archives, images) because of the WordPress version control. They updated the version from wp dashboard and it made the whole site displaying errors. I've manually replaced the wp version without touching content folder and controlled version throughout the site. Also did the speed optimization and security enhancement for the site.

Problems:

- Origin of the problem: tried to update the wordpress version from the dashboard. The version got updated and the site were showing critical error message on every page.
- The site wasn't accessible for the user. Initially it was showing #500 (Internal server error).
- Then after fixing the #500, it moved to #404 and all of the images were missing from the pages.
- Wordpress version control, removing conflicted plugins, speed optimization, on-page SEO.

Solutions:

- The site was using unstable expired wordpress version and php weren't compatible with it. So, the on fix was to change the version manually without touching anything. Downloaded the backup from cpanel, extracted it to pc and manually swapped the version folder. Then did risk assessment with plugins and removed all the plugin that seems conflicted. The site was online within hours. Activated all the plugin one by one and suggested replacement for the conflicting plugins.
- Though the images were missing from the pages, they were in media folder. So, flushed the permalinks and I used a plugin called "[Regenerate Thumbnails](#)" to recreate my images in all the standard sizes for my image placeholders.
- They already had their site in rank on suggestions. Not with the whole navigation. I submitted the schema for navigation menu using a free plugin and it reshaped the standpoint of the organization by ranking all the relevant pages within the keyword "iwfm". Here is the [result](#).

United Nations Youth and Students Association of Bangladesh

March, 2024

[UNYSAB](#) is an UN based association promotes sustainable development throughout the region. they had 2 hours to move their 12GB data's elsewhere without crashing the system (20GB Hosting). also had issues with the menubar, missing images, footer disappearance. moved server using ftp then implemented all fixes without harming their business. Here is the [site](#) on wayback machine.

Problems:

- The platform had 7000+ active users to serve and they had to move their site elsewhere in 2 hours.
- Header and footer were missing from the site. Some of the images were missing from the pages.
- The site was slow for the user. They needed speed optimization some advice throughout the transition.

Solutions:

- Estimated backup size was 12GB, but the site was hosted had a 20GB hosting. So, I knew that if try to create a backup, it will fail. So, I've tried two different methods to collect the backup without dragging the site offline. Just to be on the safe side I downloaded some partial segment of the backup using [wpvivid](#). Then used the ftp to copy the folder data. Then lastly downloaded some copies of the backup from Cpanel Backup Wizard and Jetbackups. Then sorted one by one to find the required files for new server and moved everything within the given time.
- Couldn't find the header and footer pages on the site/elementor template section. So, I used wayback machine to find previous designs. Then designed the exact header-footer page in elementor and applied through the site. Manually replaced those missing images.
- Implemented Litespeed and a free CDN and it gradually improved the site speed.

I've also worked with [Apical Textile Limited](#), [Brihonnola](#), Pro With Swadhin, Dhaka University Quiz Society, East Asia Study Centre, CMMS, Silswa and various international clients through Fiverr.

EDUCATION

University of Dhaka

Bachelor of Arts, Persian Language and Literature

Shahbagh, Dhaka
January 2019 - December 2024

Sreemangal Govt. College

Intermediate, Humanities Group

Sreemangal, Sylhet
2016 - 2018

TECHNICAL SKILLS

- # WordPress Theme Customization
- # Elementor Landing Page Design
- # Plugin Customization & Store Management
- # Functional Forms Implementation
- # HTML & CSS
- # Cpanel/Domain-Hosting Management
- # WordPress Bug Fix (server, email, error, bug, hack)
- # Speed Optimization
- # Security Maintenance
- # SEO (here is earning [reports](#) of blogging)
- # Effective in UI/UX, Color Contrast and Typography selection.
- # 6 years of professional knowledge in wordpress site creation and maintenance.
